Expect HTTP '201' and a JSON body with 'film_id' equal to '<FILM_ID>' and 'public: true'.

3. ****Verify the service-level guards**** (deduplication and unknown-film handling) via the test suite, which covers them directly:

'''bash

pytest tests/ -v # 5 passed, including the watchlist nonexistent-film test

'''

Known limitations / follow-ups (out of scope for the six review comments)

- ****GET /watchlist/<user_id>** currently errors on a non-empty list.** 'get_watchlist()' calls 'entry.film', but 'WatchlistEntry' has no 'film' relationship (only 'CollectionEntry' gets 'backref="film"' in 'models.py'). One-line fix: add 'watchlist_entries = db.relationship("WatchlistEntry", backref="film", lazy=True)' to 'Film'. Flagged, not fixed, because it isn't one of the six comments.

- ****The route layer doesn't map service exceptions to HTTP status codes.**** 'FilmNotFoundError' / 'AlreadyInWatchlistError' currently surface as '500's rather than '404' / '409'. The service layer raises the right exceptions (and is tested); wiring them to proper responses is a natural follow-up.

- The ****visibility default**** ('public=False') and the ****?sort= param**** described above are proposed follow-ups, gated on auth landing for the former.
